The most popular and used phone all over the world is the Android phone. The number of Android users increases day after day. There are some of the important things that all Android users should know their Android phone. The serial number is among one of the important things you need to know their Android phone. Some of you may not know what the serial number is. So let me clarify. The serial number is a unique number that the producer dies while it makes it. It is different from each mobile phone. No other phone shares the same serial number. Because the serial number has great importance, here you will show you how to find the serial number of your Android phone. Method 1: On the device packaging this is the easiest way to find the serial number of your Android phone. If you still have the original Android phone packaging, you can check the barcode to find the serial number and even some other information. Or you will find the label on the back side or on the bottom of the box. Even if you don't have the phone box anymore due to any reason, you don't have to worry. Simply follow the data method to see the serial number of your Android phone. This method is one of the simplest ways to find the serial number of your Android phone. For this method your Android phone should be in the working status. Follow the steps provided to get your serial number via the settings menu. Go to search settings about the device and touch it on it >> Å, status scroll down on the screen to find the serial number. On Samsung Galaxy and some latest models: you need to click More Options in the Settings menu before going to the device. Note: The CSSN number and the serial number are the same number if you need to find the IMEI number here is how to find the number of IMEI of Android phone Method 3: Å, looking under the battery [phone with removable battery] you will be Surprised to know that your phone serial number is also printed under the battery compartment. This method only works for the phone with removable batteries. The location of the serial number varies from the phone to the phone, but it is usually found under the battery that is connected to the phone. First of all, turn off the phone. Now delicately remove the back case and the battery. There you will see an attacked sticker and when you see the information on it, you will find the serial number of the phone. So these are some of the methods to find the serial number of your Android phone. I hope you are now able to see the serial number of the Android phone alone. READ ALSO: The manufacturer assigns a unique serial number to each device, in which it codified all product information: model, production country, production date. The serial number is unique for each device from a manufacturer. What is IMEI? Mobile phones, with the exception of the serial number also have the IMEI number. IMEI Å ¢ Å,~ "International identity of mobile equipment. IMEI Å ¢ Å,-" a common standard for all mobile devices, assigned to the phone at the time of factory production. It is the unique number, which is transmitted to the courier to authorize the phone in the network. The Ethei structure is the same for all phones regardless of producer. The IMEI number is also used to trace and block lost or stolen phones from the courier, which also prevents these devices from using these devices. However, IMEI block in a vector network has no effect in other networks. How can I find the serial number? As a rule, the serial number has been printed on the package and duplicate on the device, in most cases, the serial number is available via the software shell. Like An imei number? To check the IMEI phone number, type * # 06 #, press the call button and will be displayed on the screen. The IMEI number is similar to a 15-digit numeric code. IMEI is duplicated under the battery of your phone, on the package and on receipts. Apple users can find the IMEI IMEI number in the Settings-> General-> Information. What? Sndeneepinfo Å ¢ Å,~ "is the easiest way to get to get The device information before you buy it. Just enter the serial number or IMEI in the main camp and get all the information on your phone. The Apple devices have more detailed information: the physical and technical characteristics (color devices, memory, date of manufacture, the firmware version, date of manufacture of the device, the jailbreak and unlock tools). For what it is? SndDeepinfo will protect you from buying fake devices. If, as a result of the check is an error, you are careful, it might be a fake device. SnDeepinfo protects you from buying stolen devices. Any user who is a victim of theft or lost device is able to register it on the lost or stolen device database. So SnDeepInfo Å ¢ ~ "is not only a service to check IMEI and serial numbers, but also a database of stolen phones and other devices. Sndeneepinfo helps to find lost and stolen. Add or IMEI number of the lost device series database and increase the chances of finding it. If when checking the serial number or IMEI, shows that the device is marked as lost or stolen, you can return your legal owner and get a reward when he was appointed . SnDeepInfo Å ¢ ~ "It's not only the database of stolen phones IMEI and serial number checker, is the quality control, the system validates the sellers and the search service of lost or stolen phones and other devices. Currently, the service supports the control of IMEI codes of all phones, including the new Apple iPhone 12 iPhone 12 iPhone 12 Pro and Pro Max, and even Samsung Galaxy and Galaxy Note S20 10! We are planning to expand the service to check a serial number of devices of any electronic equipment and devices. The number of your device's serial number is a unique code that the manufacturer provides the phone. No serial number is the same. If you need to find your phone, there are some places that you can look at. A serial number is usually a combination of letter and numbers. There's no set length - the manufacturer determines it. The serial number usually will be denoted by a Å ¢ Å,~ Å "S / N: Å, Å,~ on the box, as you can see below. As with all the Android things, the path of your serial number could have different paths, but this guide should give you a general idea of where to look. Option One: On the retail package of your device often, the box has arrived your device, it will take the serial number. It is usually positioned outside the box on a sticker that also contains several barcodes, the IMEI number of your device, etc. It will be on the back or side of the box. Option Two: Under the battery of the device these days, most Android devices are equipped with non-removable batteries. But if you have a device with a removable battery, you will often be able to find the serial number printed below. Option Tre: In the system settings of your device to find the serial number of your device in the software, go to Settings> System. So jump on the phone> status. The number of your device in the series will generally positioned toward the bottom of this screen. If you don't see the serial number of your device here, you may need to hit around the phone section a little more - it could be in a slightly different place depending on the manufacturer. I have to love Android. What is the serial number used and should remain private? The serial number is generally used by the manufacturer to keep track of the device inventory ... mainly for things like repairs and warranty requests. Since it is usually printed on the outside of the box, you can That is not terribly important that it remains completely private. However, there are certain situations where sharing a serial number can cause pain along the way. For example, if you share the serial number and someone uses it to store a fake warranty repair on a device, you can suddenly find yourself with a phone that is out of warranty. The OEM is generally recommended to make the serial number of your public device - after all it is unique for your device, and there is no reason to share it. Share it. No tweet, please. The most popular and used phone all over the world is the Android phone. The number of Android users increases day after day. There are some of the important things that all Android users should know their Android phone. The serial number is among one of the important things you need to know their Android phone. Some of you may not know what the serial number is. So let me clarify. The serial number is a unique number that the producer dies while it makes it. It is different from each mobile phone. No other phone shares the same serial number. Because the serial number has great importance, here you will show you how to find the serial number of your Android phone. How to find the serial number of your Android 1 phone method: On the packaging of the device this is the easiest way to find the serial number of your Android phone. If you still have the original Android phone packaging, you can check the barcode to find the serial number and even some other information. Or you will find the label on the back side or on the bottom of the box. Even if you don't have the phone box anymore due to any reason, you don't have to worry. Follow the data method to see the serial number of your Android phone. Method 2: Going in the Settings menu This method is one of the simplest ways to find the serial number of your Android phone.
