Screen recorder with pointer android

If you want to show taps on your phone or tablet display, you're not alone. While there is not a reliable or consistent way to natively show taps on an iPhone with iOS 14, you can show clicks and track motion. All you need to do is connect a Bluetooth mouse to your iPhone. It's an easy way to show where and how you're interacting with your phone screen during how-to tutorials, lessons and more. In a few simple steps, learn how to show clicks and motion in place of taps and touches on your iPhone, including the iPhone 12. Plus, learn how to display different cursor sizes and colors. This quick guide shows you how. Controlling your iPhone with a mouse is perfect if you demo apps remotely, teach remotely or record how-to videos and other types of instructional content. Users can easily see the mouse cursor and follow along to see where you click on your phone, like this: Follow these simple steps to set up and connect a Bluetooth mouse to an iPhone on iOS 14. You can customize how your iPhone mouse pointer looks and moves with this comprehensive guide. Note: While you can enable certain accessibility settings on your iPhone that natively display where you tap your screen, this feature times out after a few seconds of inactivity and must be re-enabled after every timeout. If you're recording videos or other how-to content, it's not feasible to stop your recording and re-enable this screen tap feature every time you touch your device screen. Looking for the guide to using a mouse in iPadOS 14? Find it here. How To Show On-Screen Taps on iPhone with iOS 14 Begin by making sure Bluetooth is enabled on your iPhone. Ensure your Bluetooth mouse is on and discoverable. Step 2 On your iPhone, open the Settings app and navigate to Accessibility > Touch > AssistiveTouch. Step 3 Toggle AssistiveTouch on. The floating AssistiveTouch button will appear. Step 4 Scroll down to the Pointer Devices section and tap Devices. Then tap "Bluetooth Devices..." Step 5 Your iPhone will begin searching for available Bluetooth devices. Tap the name of your mouse that appears. Note: You may be prompted to enter a PIN number to pair your mouse. The default PIN number for many Bluetooth devices is 0-0-0-0, but check your manufacturer's instructions if needed. After entering the number, tap Pair. Your Bluetooth mouse will connect. You can now operate your iPhone with your mouse and show viewers exactly where you are clicking on screen. Pro Tip: If you need to record your iPhone and show taps on screen, you can do so by tapping the Record button in Control Center. An even better way to record videos with your phone is by using the computer app Reflector. Reflector lets you screen mirror, record and narrate videos from your phone all at once. They also help you to set the quality of the video according to your need.Part 3: Top 8 Screen Recording Tips That Will Make You a Good Creator Some of the following tips can help you in becoming a good creator:Anything can be recorded.Screen recording has several benefits, and one of them is that you can capture anything at any moment if you like it. But one of the downsides of this process is that you record the popup notifications on your screen by accident. So before recording, you can turn off your notifications. Make a plan on what you want to spark.If you want to avoid ramble, construct a plan about what you want to say during your screen recording. You can set up the script for this procedure which can provide you a lot of help. This tip will help you to stay on your topic and ensure you remember everything about it.Video length matters.If you add a lot of useless information to your content, your viewers will be distracted easily and lose focus. If you make shorter videos and skip any important part of your topic, you will annoy your viewers, which is not good. You just need to focus and stay to the point in your whole video. Quality of audio matters.One of the things that make a great difference is the quality of your audio. If you have bad quality of your audio, then your viewers will be easily pissed off.The video should be recorded in an appropriate size.To avoid a not-so-good experience of viewing then you should record the important parts. To stay focused, you should capture the necessary part that can be used for your content.You should look good on your webcam.You should never underestimate the effect that can be put by eye contact. To let your audience believe, set your webcam on the eye level so they can see into them to believe you.Control your mouse cursor:The mouse cursor helps your viewer to follow you on the screen. It is one of the most important tips for making good content. Never move it carelessly. Cut out useless content.While recording, you can make several mistakes as it is normal. But to make your content effective, cut out the unneeded part from it.Part 4: Best Alternative to Android Screen Recorder on Desktop (Win&Mac) iMyFone Filme - All in one screen recorder and video editoriMyFone Filme is software that is used to edit videos in different types.
