How to download snapchat with play store

The easiest way to distribute an Android app is via the Google Play store. It isn't the only distribution method, but it is the simplest way to reach millions of potential users. Publishing your first app in the Play Store isn't hard, with a few tips and pointers you can have your app ready for download in next to no time. Google has a one time $25 registration fee which you need to pay before you can upload an app. The starting point is the Google Play Developer Console. It is Google's dedicated dashboard for developers that lets you manage your apps in the Play Store. Google has a one time $25 registration fee which you need to pay before you can upload an app. Google says it encourages higher quality products, i.e. less SPAM. If you don't like the idea then it helps to look at Apple's and Microsoft's policies for their app stores. Apple charges $99 per year. Microsoft charges between $12 and $99 per year, depending on the account type.You also need to be in a supported country to distribute apps. Countries like the United States, the United Kingdom, Canada and Australia are on Google's approved list, but countries like New Zealand and Singapore aren't. Also, some of the recent additions to the European Union like Romania, Slovakia, and Slovenia don't make it onto Google's list. After you have signed up and payed the registration fee, you need to complete your account details, including your Developer Name – the name that is displayed on the Google Play store. Once that is all done you might need to wait a little as officially it can take up to 48 hours for your Google Play Developer registration to be fully processed.At this point it is probably worth taking a look at the Google Play Apps Policy Center and the Android Developer Help Center to avoid uploading content which is in violation of the Google Play terms and conditions. Any apps which violate the terms and conditions will be suspended from the store and repeated violations can result in the termination of your developer account. That probably sounds worse than it actually is. If you are creating original and well behaved apps then you don't really have to worry.Before uploading your app to the Play Store you need to prepare a few things. One of the questions you need to answer during the publishing process is about the maturity rating of your app. Google has four rating levels: Everyone, Low maturity, Medium maturity and High maturity. Google has a guide to help you rate your app content for Google Play. Basically if your app includes references to alcohol, tobacco, drugs, gambling, or violence it will need to carry one of the higher maturity ratings. Apps with mild cartoon violence need to carry the Low Maturity rating as a minimum. The Play Store listing is probably one of the most important elements for promoting your app. You also need to watch the final size of your app. Google only allows apps of 50MB or less to be published as a single APK file. Any apps which exceed that size need to use Android's APK Expansion Files API. With it you can build your app so that it downloads up to an additional 4GB from Google's servers. On most devices, Google Play downloads the extra data at the same time as the app. In some cases, however, the app must download the files from Google Play when it starts.The Play Store listing is probably one of the most important elements for promoting your app. A poor Play Store listing will result in a few downloads and probably negative comments. Your Play Store listing needs to be engaging, informative and friendly. To help attract users, Google lets you supply a variety of promotional graphics, videos and screenshots that will appear on the apps listing on the Play Store. Since these graphic are a key part of a successful Play Store listing, Google says that "you should consider having a professional produce them for you." The feature graphic needs to be bold, vivid, fun and enticing. The first graphics you need are the screenshots. You need to provide at least two phone screenshots. However for best results you should upload 8 screenshots (the most allowed by Google). You should also upload screen shots of your app running on a 7-inch tablet and on a 10-inch tablet. Google's instructions say that "for your app to be showcased in the 'Designed for tablets' list in the Play Store, you need to upload at least one 7-inch and one 10-inch screenshot."Along with the screenshots you will need to prepare a Hi-res icon (512 x 512), a Feature graphic (1024 x 500) and a Promo graphic (180 x 120). The last two are marked as optional, but you really should consider them as mandatory. Without a Feature image your app can't be featured anywhere within Google Play. Example of a good featured image. Example of a good featured image. The feature graphic needs to be bold, vivid, fun and enticing. It should use colors which stand out on plain backgrounds and it should promote your brand. It shouldn't be text heavy and neither should it be overloaded with graphic details. Anything more than the app name and maybe a few descriptive words will be lost on smaller screens. Setting the price to free is permanent, you can't change it back to paid once it has been published. The final part of the Play Store listing is to set the price of your app and in which countries it should be distributed. If the app is free then you simply mark it as free. However it is worth noting that setting the price to free is permanent, you can't change it back to paid once it has been published.For paid apps you need to set the price. You can just set the price in USD and then let Google calculate the prices for each of the local markets, or you can set prices individually for the different currencies. The latter option gives you the flexibility to adjust the local prices according to market conditions and exchange rates.Once you are happy with your Play Store listing you can upload the APK file and click the Publish button. It takes a few hours for the app to appear. The publication process is automatic and it isn't too long before your app becomes available for download.If you are uploading your first Android app then the Android Authority team wants to wish you every success! Source: ROBLOX Corporation If you've spent enough time on the internet, you may have come across a little game called Roblox. Roblox is a massively popular online game platform and game creation system that allows users to program their own games and share them with others. It's a huge hit with younger gamers and has been played by at least half of all children in the United States under the age of 16 — That's pretty impressive. Roblox is available on the PC, Mac, iOS, Android, and Xbox One. If you're curious about the game and you want to get in on the fun, you'll have to download it for yourself. As of now, there's no way to play Roblox without downloading. How to download Roblox Source: ROBLOX Corporation As of this writing, there's no way to play Roblox within your browser window. You'll have to make space and download it onto the device you'd like to play it on. Downloading the game is very easy and totally free. If you're downloading onto the PC or Mac, head over to the Roblox website and create an account. Click on the play button on any of the games and you'll be prompted to download the Roblox Player. Once the download is complete, the game will start. Now that the Roblox Player is installed, you can jump into any game you want to from your profile on Roblox.com. If you're interested in downloading Roblox on your phone or the Xbox One, just search for Roblox in your chosen platform store and install it. It's that simple. Endless possibilities Roblox might seem cute and simple, but a closer inspection will reveal a very robust game creation platform. It's also one of the best free to play games and is a great introduction to coding, and an even better way to keep kids connected with their friends. It's easy to see why it's one of the best games for kids on any platform. Creativity unleashed Roblox is an insanely popular platform and game creation tool that has captured the attention of younger gamers. We may earn a commission for purchases using our links. Learn more. Whether this is your first smartphone or just your first using Android, there's a lot to love here, and it all starts with finding some apps to fill that new phone (or tablet) with. Google Play is the app store that Google runs, and it's also an important piece of Android's security as it scans apps before and after they're downloaded and monitors them for unusual activity. It can be a bit overwhelming when you first open up Google Play, but don't worry, we're here to help you get started! If you already know the name of the app you're looking for, or have a specific app type in mind, you can search for it rather than browsing through app categories. Tap the Google Play icon on your home screen. Tap the white search bar at the top of the screen. Enter the name of the app (or type of app) you're looking for. Tap the search icon on your keyboard (should be in the location of the Enter key). If you're not quite as sure what you want, or your search results don't help you (don't worry, it happens to all of us), there are other ways to find apps on Google Play. How to browse apps in Google Play You can browse through Google Play's Top Charts to try and find a new app you want to install. Tap the Google Play icon on your home screen. Tap Top Charts underneath the Home tab. You're now ready to browse the charts for new apps. Swipe left and right between the charts for Top Free, Top Paid, Top Grossing, Top New Free, Top New Paid, and Trending. You can also browse through Google Play by category: Tap the Google Play icon on your home screen. Tap Categories underneath the Home tab. You're now ready to browse the charts for new apps. Swipe left and right between the charts for Top Free, Top Paid, Top Grossing, Top New Free, Top New Paid, and Trending. You can also browse through Google Play by category: Tap the Google Play icon on your home screen. Tap Categories underneath the Home/Games tabs. Tap the category you'd like to browse. Now, some app categories are just a series of Top Charts narrowed to that category of app, but other categories have featured apps and subcategories in addition to the Top Charts for that category. Once you've found one you like, it's time to install it. How to download free apps Tap on an app in the search results or categories. Tap Read more and look through the app's description and reviews to ensure the app seems right for you. Tap Install. The app will now download and install itself, usually in a few seconds depending on how large or small the app is. If you're on a device running an older version of Android, you'll have to agree to an app's permissions before it downloads. Read the permissions before clicking Agree. Once the app is finished installing, an Open button will appear in the same place the Install button previously occupied. How to buy paid apps The process for buying a paid app is just a hair different than downloading a free one, and it goes like this: Tap on an app you'd like to buy. Tap the price to bring up the payment options. Your default payment method will be shown. If you want to change your payment method, tap the down arrow next to your current payment method. Tap Payment methods. Tap one of your established payment methods. If you don't have one, you'll be prompted to add a credit card, PayPal account, or carrier billing. Tap Buy. Confirm your Google Play password or use your fingerprint to confirm your purchase. The payment is processed and the download will begin. Tap Continue to close the window. Apps need updates from time to time, and if you need to manually update your apps, here's how you do it. Swipe in from the left edge of the screen OR tap the three line menu icon in the top white bar to open the menu. Tap My apps & games. App needing updates will appear at the top of the list. To update a single app, tap the Update box next to the app. Tap Update All to update all the apps needing updates. Rather than manually updating apps, which is easy to forget, Google Play is set to automatically update apps for you when you're on Wi-Fi. If you'd prefer that it install updates automatically even when on cellular data — or not auto-update at all — you can change the setting easily. Swipe in from the left edge of the screen OR tap the three line menu icon in the top white bar to open the menu. Scroll down and tap Settings. Tap Auto-update apps. To turn off auto-update, select Do no auto-update apps. To enable auto-update on cellular data, select Auto-update at any time. If there are individual apps you do not want auto-updated, you can opt them out of auto-update while allowing your other apps to stay updated. Tap the app you don't want auto-updating. Tap the three dot menu icon in the top right corner of the screen (next to the search icon). Tap to uncheck Enable auto-update. How to uninstall apps Tap the app you want to uninstall. Tap Uninstall. For some paid apps within the refund window, this box might read Refund instead. A window will open confirming you want to uninstall the app. Tap OK. The app will now uninstall and remove itself from the device. How to remove apps from your app library If you install an app, don't like it, and uninstall it, it's still attached to your app history in the Library section of My apps & games. If you don't want an app in that list anymore, here's how you get rid of it. Tap the X to the right of the Install button on the app you want to remove from your library. A window will pop up asking you to confirm that you wish to remove this from your library. Tap OK. Your turn! What do you love about the Google Play Store? Find any good apps lately? Have you downloaded the Android Central app yet? If not, go do that, so you can keep up to date on the latest Android and Google news and have easy access to more helpful how-to content! Updated May 2018: The steps and photos in the article have been cleaned and updated to reflect changes to Google Play's layout and appearance.
